

VOIP TELEPHONY

A managed service with real time billing to the nearest second.

OnPhone Server
190 x 149 x 26 mm
Intel CPU Inside.
24W Power Consumption.
Gigabit LAN

The OnPhone Server is the brain behind our total office solution.

The system is based on Asterisk telephony software which has been deployed to over 1.3 Million servers in 150 Countries.

The server contains all of the software and applications to

drive the behaviour of the PABX system. OnPhone gives you the power to scale up or down services inline with your requirements.

Unlike some other providers we have one plan that gives each of our customers access to the full features for a flat monthly cost.

The system is small and light weight and can be hosted in your office or in our secure data centre.

By using the OnPhone system you can also get access to our exclusive OnOffice remote working solution.

Product Specifications

The OnPhone system comes with all of the extension features that you would expect from a modern telephony system such as call forward busy, no answer, do not disturb, call waiting, message waiting, and many more. You can choose to have OnPhone features configured at no additional cost. The best thing is if you are upgrading your system you get to keep your existing phone number!
